Tehnologie multi-functionala avansata de remodelare corporala si redobandirea elasticitatii pielii

FA CUNOSTINTA CU CELLULIX

● **Tratament personalizat**

Selecteaza capatul corespunzator pentru fiecare zona de tratament. Creaza un plan personalizat de tratament.

● Tehnologie Infrarosu + Radiofrecventa + Vacuum

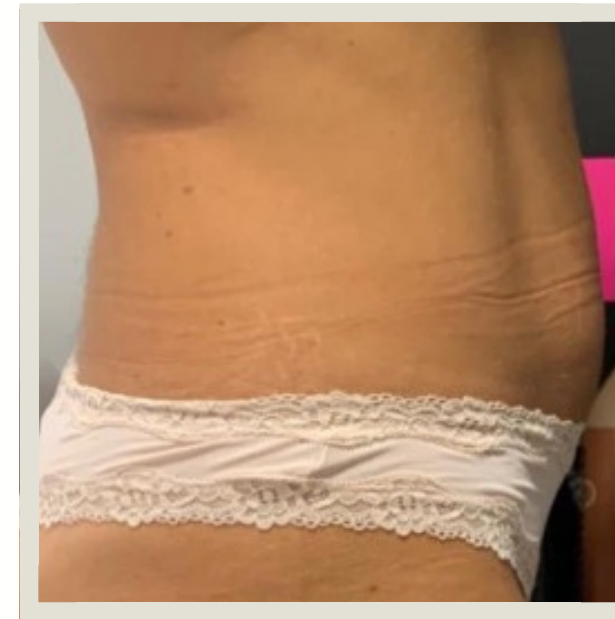

Tehnica de remodelare cu Cellulix combina lumina infrarosu, energia radiofrecventei multipolara si a vacuumului, incalzind profund celulele adipoase, tesuturile si a fibrelor de colagen dermic. Aceasta tehnica de incalzire si vacuum stimuleaza cresterea de colagen si reda elasticitatea pielii, in acelasi timp, reduce volumul de grasimi remodeland corpul.

DUPA

● VACUUM

Masajul regulat cu vacuum poate promova drenajul limfatic si scaderea in volum a celulelor de grasime

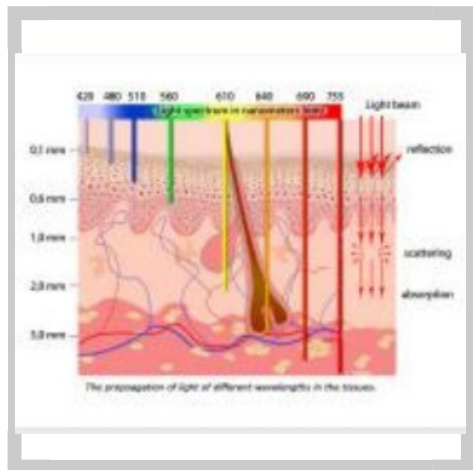

● RADIOFRECVENTA

Radiofrecventa stimuleaza microcirculatia sangelui, intareste sistemul limfatic, promoveaza metabolismul grasimilor. Simularea energiei termine poate ajunge la 0-15 mm de piele provocand astfel relaxarea sangelui. Imbunatateste metabolismul, sporeste flexibilitatea ligamentelor si a muschilor.

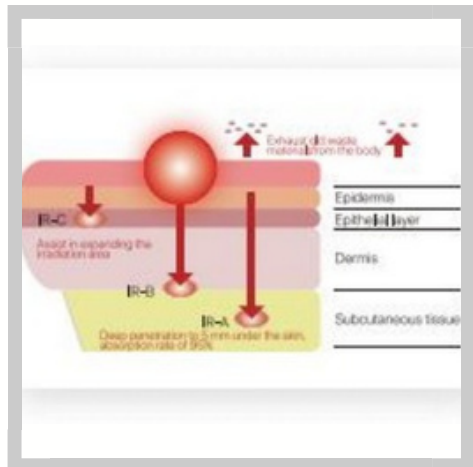

● ROLELE DE MASAJ

Masajul cu role poate fi de 4 feluri rupand astfel tesutul adipos conjunctiv.

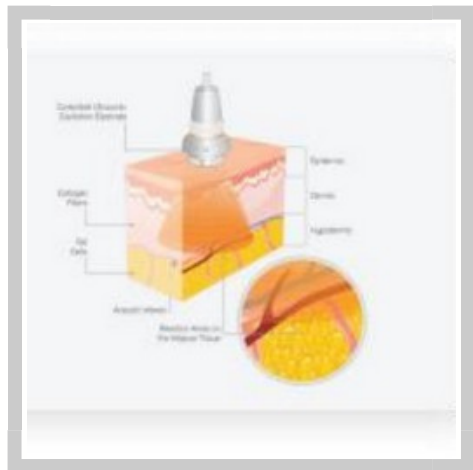

● LED - 690nm

Lumina led poate stimula tesutul de sub derm, astfel evitati sindramul Cutis Laxa dupa slabire.

● IR - Infrarosu

Lumina Infrarosu creste nivelul de oxigen al corpului, retentia de apa se transforma in molecule de apa independente fiind eliminate mai usor.

● Ultrasunete

Ultrasunetele, sau cavitatia cu ultrasunete, este un produs cosmetic, procedura care este folosita pentru a descompune grasimea din corp.
